Aim of the Workshop:

Being aware of the fact, that the beneficiary countries differ significantly in their experience with modelling tools and scenarios, the objective of the workshop will be to introduce different models and methodologies and to derive scenarios and projections for more detailed and country-specific capacity building. This will include methods on how to overcome data gaps and/or decrease the level of uncertainty of emission projection scenarios.

Examples of EU Member States will be presented on how their experts have developed scenarios and projections and how the work has been performed from scratch. This will be a useful reference providing additional inputs and ideas to the beneficiaries' experts that will gain knowledge from the theoretical explanations to the practical examples
